

# Write your MySQL query statement below

```
select distinct(author_id) AS id from Views
```

```
where viewer_id = author_id
```

```
order by author_id;
```

//JUST GIVE ATTENTION TO

He said in the problem description that there is no primary key which means you can have duplicated rows so the answer too may having duplicated results for the same author id which will have no meaning and this is first and the second that it will give you wrong answer and that is why we need to use DISTINCT here
