select s.unique_id , f.name

from EmployeeUNI s

right join Employees f on f.id=s.id;

> → I make right join here cause in the problem it wants from me to print the unique id in null if there is employee does not have unique id so we will select all in the right table even if the null ones

This solution will get ACC too

SELECT s.unique_id, f.name

FROM Employees f

LEFT JOIN EmployeeUNI s ON f.id = s.id;
